Research is the process of creating new knowledge.

Scientific research is the systematized and orderly process whereby we obtain new, relevant, and reliable information based on the scientific method. It aims to produce new knowledge focused on answering a question or solving a problem. Therefore, we may understand that the creation of new knowledge can concentrate on enriching existing scientific knowledge, adding new data and information to modify or create theories and increase knowledge. This is known as “basic research.” When such knowledge is used to solve a specific practical problem or answer a particular question with practical purposes, then we are in the realm of “applied research.” Both are important and interdependent. Research is one of the leading university functions. Therefore, our School of Dentistry has a key role in creating new knowledge. It focuses on providing original and innovative knowledge that adds to the existing scientific body of research and applying this knowledge to solve problems in our field of study: medicine/dentistry. The School of Dentistry conducts basic, clinical, and epidemiological research to study various national, regional, and global oral health problems.

Odontoestomatología has proved essential to communicate our research activities. This journal disseminates cutting-edge dental knowledge of national and regional relevance. Over time and boosted by the hard work of its directors and editorial staff, our journal has reached a prominent position of well-deserved recognition among peer researchers in Latin America. It has become one of the main dissemination mechanisms for dental research in Latin America.

Therefore, it fills me with pleasure and pride to announce that as of 2021, Odontoestomatología has been the dissemination outlet of the Uruguayan Society for Dental Research (SUIO), a member of the International Association for Dental Research (IADR). Since its foundation in 2006, the SUIO has worked tirelessly and firmly committed to promoting, encouraging, and disseminating national dental research in various regional and international settings. Its new quality and official dissemination outlet creates a strong synergy

that will help disseminate Uruguayan dental research. We take this opportunity to make this important announcement and to present the new logo of our beloved SUIO, which will be part of the journal from now on.

Thank you very much.

**Prof. Dr. Ronell Bologna-Molina.PhD**

Molecular Pathology in Stomatology  
Universidad de la República, Montevideo, URUGUAY  
President of the Uruguayan Society for Dental Research (SUIO)  
Specialist in Oral Pathology and Medicine.  
National System of Researchers (SNI) Level II (ANII)  
PEDECIBA Researcher–Grade 4  
Councillor for Latin America and the Caribbean  
International Association of Oral and Maxillofacial Pathologists (IAOP)  
AIPMB–Board Member (South America)
